## Living with Coyotes

Coyotes, like other wildlife, sometimes come into conflict with humans. Since migrating to Ontario from the west more than 100 years ago, coyotes have adapted well to urban environments and can now be found in both rural and urban settings. Coyotes can be found across Ontario but are most abundant in southern agricultural Ontario and urban areas.

Changes in land use, agricultural practices, weather, supplemental feeding and natural food shortages may contribute to more coyote sightings in your community.

You can take steps to make sure coyotes aren't attracted to your property and to keep your pets safe. To reduce the potential for coyote encounters, the Ministry of Natural Resources and Forestry has the [following tips for the public](#).

### Do not approach or feed coyotes

- Coyotes are usually wary of humans and avoid people whenever possible. However, they are wild animals and should not be approached.
- Do NOT feed coyotes — either intentionally or unintentionally. It makes them less fearful of humans and makes them accustomed to food provided by humans.
- Aggressive behaviour towards people is unusual for coyotes, but you should always exercise caution around wildlife.

### Secure garbage, compost and other attractants

- Do not provide food to coyotes and other wildlife. Properly store and maintain garbage containers to help prevent coyotes from becoming a problem.
- In the fall, pick ripe fruit from fruit trees, remove fallen fruit from the ground and keep bird feeders from overflowing as coyotes eat fruit, nuts and seeds.
- In the summer, protect vegetable gardens with heavy-duty garden fences or place vegetable plants in a greenhouse. Check with your local nursery to see what deterrent products are available.
- Place trash bins inside an enclosed structure to discourage the presence of small rodents, which are an important food source for coyotes.
- Put garbage at curb-side the morning of the scheduled pickup, rather than the night before.
- Use enclosed composting bins rather than exposed piles. Coyotes are attracted to dog and cat waste as well as products containing meat, milk and eggs.
- Consider eliminating artificial water sources such as koi ponds.
- Keep pet food indoors.

### Use deterrents and fences to keep coyotes away from your home and gardens

- Use motion-sensitive lighting and/or motion-activated sprinkler systems to make your property less attractive to coyotes and other nocturnal wildlife.
- Fence your property or yard. It is recommended the fence be at least six-feet tall with the bottom extending at least six inches below the ground and/or a foot outward, so coyotes cannot dig under the fence. A roller system can be attached to the top of the fence, preventing animals from gaining the foothold they need to pull themselves up and over the top of a fence.
- Electric fencing can also help deter coyotes from properties or gardens in some circumstances.
- Clear away bushes and dense weeds near your home where coyotes may find cover and small animals to feed upon.
- Close off crawl spaces under porches, decks, and sheds. Coyotes use these areas for denning and raising young.

## How to report a coyote death

The Fish and Wildlife Conservation Act sets out the legal actions you can take to [respond to problem wildlife](#) on your property. Generally, you or your agent may capture, kill, or harass problem coyotes to prevent damage to your property.

- A person who kills a coyote in protection of property in northern and central Ontario – Wildlife Management Units 1-42, 46-50 and 53-58 – must immediately report it at <https://www.ontario.ca/environment-and-energy/keep-dead-wild-animal> if the animal is being kept, or call the local ministry in all other cases.
- You can invite a licensed small game hunter or a trapper to hunt or trap coyotes on your property during the open seasons where local bylaws permit. To locate a licensed trapper, contact the [Ontario Fur Managers Federation](#) at 705-254-3338 or email [furmanagers@gmail.com](mailto:furmanagers@gmail.com).

## Keep pets safe

Cats and small dogs may be seen as prey by coyotes, while larger dogs may be injured in a confrontation. To avoid these situations, consider the following suggestions:

- Install proper fencing.
- As coyotes are primarily nocturnal, pets should be kept inside at night.
- Keep all pets on leashes or confined to a yard.
- Keep cats indoors and do not allow pets to roam from home.
- Feed pets indoors.
- Spay or neuter your dogs. Coyotes are attracted to, and can mate with, domestic dogs that have not been spayed or neutered.

## If you encounter a coyote

- Do not turn your back or run. Back away while remaining calm.
- Use whistles and personal alarm devices to frighten an approaching or threatening animal.
- Call 911 if a coyote poses an immediate threat or danger to public safety.
- Never attempt to tame a coyote.

## Reduce risk of predation on livestock

- Barns or sheds can provide effective protection from the threat of coyotes preying on livestock.
- Guard animals, such as donkeys, llamas and dogs, can be a cost-effective way to protect livestock from coyotes. Guard animals will develop a bond with livestock if they are slowly integrated and will aggressively repel predators.
- For more information on preventing livestock predation, please visit the [Ministry of Agriculture, Food and Rural Affairs](#) website.

## Managing problem wildlife

- You are responsible for managing problem wildlife, including coyotes, on your own property.
- The Ministry of Natural Resources and Forestry helps you and municipalities deal with problem wildlife by providing fact sheets, appropriate agency referrals, and information on steps that can be taken to address problems with wildlife.
- The Fish and Wildlife Conservation Act sets out the legal actions you can take to deal with problem wildlife on your property. Generally, you or your agent may harass, capture or kill problem wildlife to prevent damage to your property. Additional authorization is required when this involves deer or elk; please contact the [local ministry office](#) for more information.
- You can invite a licensed small game hunter or a trapper to hunt or trap coyotes on your property where local bylaws permit. There is no closed season for coyotes in the majority of southern Ontario.

## LEARN MORE

- Read more on coyotes in the community, including biology and behaviour of coyotes, at [ontario.ca/livingwithwildlife](http://ontario.ca/livingwithwildlife).
- Learn more about coyotes, including how to deal with coyote problems, by calling your local [district office](#).
